

The First Mobile Big Bag Filling System

Save unnecessarily high storage capacities and costs and avoid inefficient routes. Have your raw materials and products filled where it is expedient for you! With the big bag filling system from endeco, you can bag granules and similar materials as required, for example in the harbors of your various destinations. Ready for delivery to your customers.

It is this simple:

- Load the big bag station onto a standard flat bed trailer
- Drive to the filling location
- Set up the station in only two hours
- Fill the big bags, 60-90 pieces/hour!
- Ready for delivery to customers in the region
- Dismantle the station in just two hours

**Two complete bagging stations
in one mobile system!**

Freedom of flexibility: the innovative mobile big bag filling system from endeco

Full performance – high throughput!

- 30 t/hr to 80 t/hr depending on the product and product properties
- Filling weights from 300 – 1,200 kg

Innovative and well-thought-out down to the smallest details

The system comprises two complete bagging stations with pneumatic clamps, automatic big bag inflation, aspiration and bulk loading scales. It is easy to use. Only two people are required to operate it! The system is ideal for granulates, fertilizer, feed, wood pellets etc.

Tailored to your needs – designs and options:

- Designed according to ATEX requirements in zone 20/21/22
- Material S235 JR or stainless steels 304 or 316L
- Compliant with GMP, FDA, and EU 1935
- Integrated in two ISO containers, 20-feet high cube / special design
- Compact and stackable
- Standalone: only 400 V power supply required
- Self-sufficient supply with compressed air and process air
- Weighing system can be calibrated
- Basic electrical installation with light, sockets, and electric heating included
- Can be individually configured
