

# The Flexible Storage and Mixing Container System Plus Emptying Station

From granules to powders: with the endeco storage and mixing container system with emptying station, you benefit from outstanding quality in storage, mixing, and emptying. What makes this system unique is the integrated conical valve mechanism. It closes the container gap-free. Containers as needed and fixed emptying station: you have full flexibility at all times, as the number of containers increases with your requirements.

#### **Convincing performance:**

- Stainless steel container with 500-2000-liter volume
- For products from milk powder to plastic granules
- Food-safe
- Integrated cone valve for optimal emptying
- Stackable, forklift and lift truck compatible
- Emptying station with compressed air technology
- Special design for container mixing plants

**Store, mix, and empty  
the efficient way!**

## The completely clean container solution for your bulk material!

### Easy to empty quickly

Simply place the container on the station for emptying. The station works with a rubber bellow and compressed air. Using the inflatable rubber bellow, the locking cone is only lifted as far as needed for residual discharging without segregation. This keeps the cleaning effort to a minimum, allowing you to swiftly use the container again! The container closes on its own if no more media is detected.

### Important advantages:

- Food-safe, gap-free
- Content is damp-proofed
- Minimized dust formation
- Gentle on the product also during mixing
- Fewer components, less need for spare parts

### Tailored to your needs – designs and options:

- Designed according to ATEX requirements in zone 20/21/22
- Material S235 JR or stainless steels 304 or 316L
- Compliant with GMP, FDA, and EU 1935
- To prevent cross-contamination: containers can be allocated to certain product groups
- For automated processes: ready for barcode or RFID technology
